

# **Best Place to Work & Our Story**

**Brought to you by Ironstone**

## The Best Place to Work components:

### User & Devices

Any modern client platform needs to build upon a modern identity management service, that allows for a flexible and secure workspace.

### Application management

Using modern solutions, we can provide your organization with the tools it needs to allow users to have a modern workplace, even with the "we can't get rid of" legacy applications.

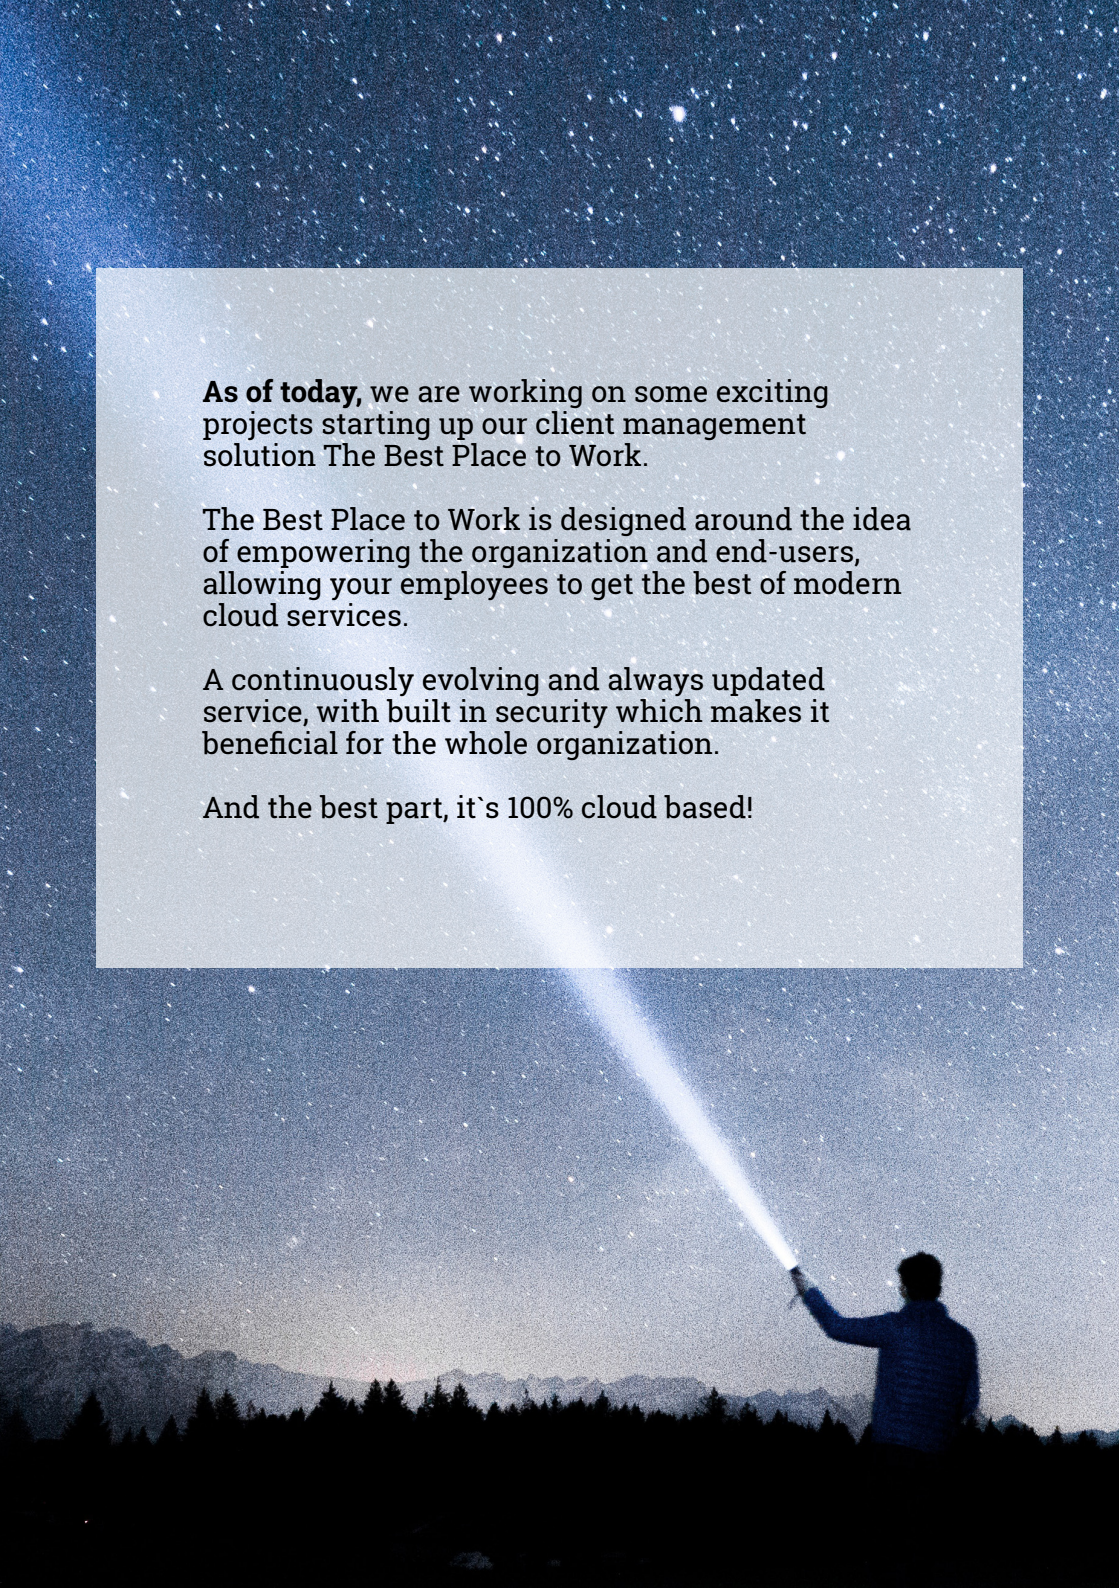

### Reporting & Alerting

The highway to success with a modern workspace is to have control over cost, compliance and alerting. Let's look at how we solve it with The Best Place to Work.

**As of today**, we are working on some exciting projects starting up our client management solution The Best Place to Work.

The Best Place to Work is designed around the idea of empowering the organization and end-users, allowing your employees to get the best of modern cloud services.

A continuously evolving and always updated service, with built in security which makes it beneficial for the whole organization.

And the best part, it's 100% cloud based!

In additional to **onboarding** users and **implementing** the solution, we have also been preparing the users with **instructions** on the changes, the **transition** from legacy client management to a cloud based service from Ironstone.

We truly believe that the **user experience** is a critical **success factor** for the solution. To achieve a successful deployment Ironstone have developed an **adoption plan** for the customer where we focus on how they want to work in the future.

A whole set of new processes are implemented internally at the customer and IT needs to back up the end user. **The adoption plan** contains analysis and depth interview, videos, guidelines and workshops.

We are basically putting **your business first**.

This is a shift from traditional management where client administration can be complex, complicated and expensive. And let's not get started on updates....

The development of this solution started up by **recognizing** the obstacles and the challenges with outdated systems, wrong practices and many 3. parties involved.

Not very unlike the story of why Ironstone started up. **Let's take a quick trip back in time.**

The year is **2016**, by recognizing these challenges mentioned over, it was decided to start up a 100% cloud company. With a mission is to support customers with modern, flexible, user-friendly and always up to date cloud solutions.

**Going back to the very start of computing** both computers and software were designed and developed to help the business. Although that was the intention many times IT has been seen and in fact been a business disabler rather than a business enabler.

High cost with little business value has been the result in many IT-solutions **in the past.**

Ironstone focus on the business and **value** for the customer, we just happen to work with IT. What this means is that Ironstone will use **IT to enable business**, use current and new technology to refine what is already in place.

Ironstone will be your **partner in business** rather than a traditional IT-partner.

This is where Ironstone makes the difference!

At Ironstone we provide services using Microsoft cloud platform to deliver comprehensive solutions and sophisticated IT infrastructures to our clients.

We strive to be the best and most competent IT-partner out there, providing our customers first class distribution, management, support and migration to the cloud.

This is a whole **new ball game** and changes everything we know about IT; from contract, licensing to deployment to the end user.

Cloud services is a disruptive business.

Ironstone will enable your company to look at your IT spending in a different view. From now on, consider all your investments in this area as an investment in **growing your business**.

By cleverly combining the power of innovation with an in-depth business sense, Ironstone help companies heighten **efficiency**, boost **productivity**, accelerate **growth** and anchor **continuity**.

Ironstone is a **Gold Partner** for Microsoft's Azure Cloud Platform. This is Microsoft's highest partnership level and signifies that Ironstone has earned the highest possible competency requirements of a partner.

This accreditation further supports Ironstone's role as one of the top independent partners for our customers.

Benefit from cloud solutions that accelerate the speed of your company and amplify the business outcomes of your organization.

Add to that our cloud expertise and a strong partner ecosystem, and you end up with a company that truly lets technology work for business.

**Your business.**
